

Human Element P21 Integration

The Human Element P21 Connector gives Adobe Commerce merchants the power of a unified commerce experience!

Williams Distributing

“By successfully integrating our eCommerce and ERP systems together through API connectors, Human Element created a robust platform with real-time, seamless data exchange, eliminating the risk of duplicate data or the need to manage inefficient batch processes. The interconnected platform assures customers that all products, pricing and inventory levels displayed in the online storefront are accurate and fully up to date.”

- Mike Vorce, Williams Distributing

Our custom P21 integration allows merchants to use the core features of Adobe Commerce and Epicor Prophet 21 ERP systems by unlocking the frontend capabilities of Adobe and utilizing the backend data already in place. Give your B2B customers the B2C experience they expect while seamlessly integrating with your existing business intelligence and IT systems.

This powerful tool allows Adobe Commerce merchants using Epicor Prophet 21 to:

- Make real-time changes to product pricing
- Export order history
- Enable front-end product restrictions based on price families
- Perform category, product catalog, and company syncs
- Restrict products available to customers
- Set up the batch size, export retry interval, and number of retries before an error is logged
- Error notification emails
- And more!
